

Expectations for the future

It is important to try to get all schools on the same basic level. The problem is that all European countries have different laws about the medical part: compulsory medical education is necessary. For legalisation one has to go to the ministry of Education of the own country.

Main goal of RiEN: control the minimum (basic) level. We think that when only good schools are accepted by RiEN, more and better schools will be part of our organisation.

We discussed on different point:

1. What would be the benefit for schools to be a member of RiEN?
2. What is research ?
3. How can you use research for Reflexology?

Eduardo says to give hands to each other and today is a beginning; we learned that a process takes 10 years, so when we start today we have 10 years to grow. For all students it is important to talk about research and reflexology. We need to do more, but we need your help to make reflexology stronger all over the world.

Ronald needs people who want to join the EWG to help the activity grow and let survive the EWG. They have a skype meeting about every 3 months (so 3 – 4 times a year) It should be nice to have a representative of the schools and also of the full members in the EWG.
